SIGNATURE - -----

B.C.A . 3rd Year (6th SEMESTER)

DATE - __/__/__

DECLARATION

I, Shruti Shahi , Aditya Gupta , Priyanshu Asthana , Diwas Tripathi, student of B.C.A 6th semester deaclare the project entitled “Restraunt Management System” is my own work conducted under the supervision of **Ms. TARANNUM NISHA**.

I further declare that to the best of my knowledge the project doen not contain any part of any work which has been submitted for any other project either in this institute or in any other.

Place :-

Date: __/__/__

Signature of the Candidate

CERTIFICATE

This is to certify that **ADITYA GUPTA , PRIYANSHU ASTHANA , SHRUTI SHAHI , DIWAS TRIPATHI** has completed the training project titled “ **RESTAURANT MANAGEMENT SYSTEM** ”

In pursuant to the ordinances for award of the degree of my knowledge it is his original work.

Director / Principal

MARWAR BUSINNES SCHOOL

Project Guidance / Supervisor

Ms. TARANNUM NISHA

H.O.D (COMPUTER DEPARTMENT)

ACKNOWLEDGEMENT

The completion of this training work could have been possible with continued & dedicated efforts & guidance of large number of faculty & staff members of the institute. I acknowledge our gratitude to all of them. The acknowledgement however will be incomplete without specific mention as follows .

I wish to acknowledge my deep gratitude to **H.O.D Prof. Tarrannum Nisha** , teacher at **Marwar Business School** for her cooperation and guidance. I am also thankful to his Lab assistant that provided staunch support throughout the project and helped us to complete the project successfully.

Finally, I would like to say that I am indebted to my parents for everything that they have done for me. All of this would have been impossible without their constant support. And I also thank to God for being kind to me and driving me through this journey.

ABSTRACT

Running a restaurant is hectic enough as it is, so why not make the day to-day processes easier by having a system that will help ease the workload for you? There are so many day-to-day processes that restaurants have to deal with. These can range from scheduling in employees, managing HR, monitoring employee attendance to preparing for payroll and to keep record of transactions and database. In current marketplace, there is a great value for food, restaurants and its management. There is day by day increment on the number of restaurants and food places that are emerging today. It can be considered as a rapid growth in the field of business and food restaurants and its management system. The management system applied for every restaurant is different from the other one. Some restaurants may be bigger while the other may be smaller but every restaurant or hotel requires a management system and this is termed as Restaurant Management System.

RMS that is, Restaurant Management Systems are the crucial technologies that enables a single outlet or enterprise to better serve its customers and aid employees with food and beverage transactions and controls. Restaurant management System is database program that keeps record of all transaction carried out in the restaurant on daily bases. The Restaurant Management System helps the restaurant management to keep adequate record of all transactions carried out and does that will still be carried out by the restaurant and maintain the database of the restaurant. While investing in elements such as marketing and décor will go a long way in advancing the growth of a restaurant, investing in the right technology also plays a huge role, with restaurant management software being among the “must haves”. Every restaurant out there, whether small, medium-sized, or large, will benefit greatly by switching from manual restaurant management processes to automated or software-based ones

1. REQUIREMENT ELICITATION:

Initial investigation:

There are so many day-to-day processes that restaurants have to deal with. These can range from scheduling in employees, managing HR, monitoring employee attendance to preparing for payroll and to keep record of transactions and database. Restaurant Management is the profession of managing a restaurant. Associate, bachelor, and graduate degree programs are offered in restaurant management by community colleges, junior colleges, and some universities in the United States. Management generally involves three major responsibilities: Administration, Front-of-the-House Management and Back-of-the-House Management. This system is developed to automate day to day activity of a restaurant. Restaurant is a kind of business that serves people all over world with readymade food. This system is developed to provide service facility to restaurant and also to the customer. This restaurant management system can be used by employees in a restaurant to handle the clients, their orders and can help them easily find free tables or place orders.

Study & Requirement Gathering:

In our current situation we face many problems while we order food (from customers point of view).

Doubt on waiters (from manager's/ management's point of view). To revoke these types of problem we need this software. It is very logical to handle the above problems. This system will not be complex, very easy to understand (user friendly interface). In current market place, upper and middle-class restaurants will have much demand of this system.

2. INTRODUCTION

Restaurant Management system:

This restaurant management system can be used by employees in a restaurant to handle the clients, their orders and can help them easily find free tables. The restaurant menu is organized by categories (appetizers, soups, salads, entrees, sides and drinks) of menu items. Each menu item has a name, price and associated recipe. A recipe for a menu item has a chef, preparation instructions and associated ingredients.

Restaurant management system is the system for manage the restaurant business. Restaurant management can vary across multiple management styles, however, there is always one common denominator when it comes to setting goals: maximizing a restaurant's profitability. In order to maximize a restaurant's profitability, one has to always examine and understand a restaurant's operational costs and how these relate to a restaurant's productivity and efficiency in delivering quality service to its customers. Management takes a very important role in controlling and manipulating the balance of costs and profitability. An effective manager must always concern himself/herself with restaurant issues that pertain to inventory/stocking, pricing, order-taking, and much more. Oftentimes, a restaurant's profitability either rises or falls depending on how well it is being managed. Managing a restaurant using a well-developed software minimizes the liabilities of mismanagement and productivity loopholes. The incorporation of a Restaurant Management Software in the managing of various business processes entails that your restaurant is competitive, innovative, well managed, and up-to-date with the latest management and business trends.

3. SCOPE OF PROJECT:

Scope of project in building a computerized system for silk route to handle billing restaurant records was to include the employees who are involved in the process of billing of a customer to storage of restaurant records and enables to view the records as desired. The employees are given limited access in order to safe guard the privacy and security of the records. The database is maintained in the whole project.

4. OBJECTIVES:

The main objective is to maximize the profit by increasing efficient and decreasing the mistakes that takes place in the kitchen, this will be done without compromising customer satisfaction. At this moment of time, there are still numerous restaurants that still use paper based system to get messages across between the restaurant and the kitchen, this way of communication is one of the least efficient method. However, this approach may be implemented and designed in a successful profitable restaurant but there are numerous problems which might be seen as reducing the restaurants efficiency, they are the following:

- The lack of communication that is caused by handwriting.
- Uncontrolled order logging (poor order taking).
- Unproductive communication between restaurant and kitchen.
- Faults with order taking and lack of time management.
- Lack of good quality stock management.
- Limited statistical output. So, in order to overcome these problems, we have made an application that is restaurant management system that mainly focuses on the above given problems. We have tried to build a user-friendly interface

5. PROCESS MODEL TO BE USED WITH THE REASON:

The process model we have used here is iterative model. The iterative model is a particular implementation of a software development life cycle (SDLC) that focuses on an initial, simplified implementation, which then progressively gains more complexity and a broader feature set until the final system is complete. When discussing the iterative method, the concept of incremental development will also often be used liberally and interchangeably, which describes the incremental alterations made during the design and implementation of each new iteration. Unlike the more traditional waterfall model, which focuses on a stringent step-by-step process of development stages, the iterative model is best thought of as a cyclical process. The requirements of our project can be accomplished through iterative model.

Phases to be covered in iterative model for Restaurant Management System:

- **Planning & Requirements:** As with most any development project, the first step is go through an initial planning stage to map out the specification documents, establish software or hardware requirements, and generally prepare for the upcoming stages of the cycle.
- **Analysis & Design :** Once planning is complete, an analysis is performed to nail down the appropriate business logic, database models, and the like that will be required at this stage in the project. The design stage also occurs here, establishing any technical requirements (languages, data layers, services, etc) that will be utilized in order to meet the needs of the analysis stage.
- **Implementation:** With the planning and analysis out of the way, the actual implementation and coding process can now begin. All planning, specification, and design docs up to this point are coded and implemented into this initial iteration of the project.
- **Testing:** Once this current build iteration has been coded and implemented, the next step is to go through a series of testing procedures to identify and locate any potential bugs or issues that have cropped up.
- **Evaluation :** Once all prior stages have been completed, it is time for a thorough evaluation of development up to this stage. This allows the entire team, as well as clients or other outside parties, to examine where the project is at, where it needs to be, what can or should change, and so on.

6. SYSTEM REQUIREMENT SPECIFICATION

6.1 DATA FLOW DIAGRAM

Level 0: Data Flow Diagram

Level 1: Data Flow Diagram

Level 2: Data Flow Diagram

Level 2: Data Flow Diagram

6.2 STRUCTURAL DIAGRAM

6.2.2 ARCHITECTURE DIAGRAM

6.3 BEHAVIORAL DIAGRAM

6.3.1 Use Case Diagram

6.3.2 Sequence Diagram

6.3.2 Sequence Diagram

7.ER Diagram for Restaurant Management System:

The **Restaurant Management System ER Diagram** reveals the relationships between restaurant entity sets that form its database design. This displays the logical structure of databases. It is done by identifying entities, their properties, and the interactions between them.

The **Restaurant Management System database design** is sketched out using **ER diagrams**. This database sketch for a restaurant management system is made up of **entities, their attributes, and their relationships**.

What is a Restaurant Management System?

Restaurant management software aims to simplify some of the most common management duties in the restaurant industry. For example, it can combine information from different online booking channels so you can see all reservations and keep this information up to date to avoid double bookings.

This restaurant management system refers to all software that aids in the efficiency of foodservice operations. Restaurants, bars, bakeries, cafes, cloud (dark, virtual, ghost) kitchens, food trucks, and delivery services are all examples.

Definition of ER Diagram:

The **Restaurant Management System ER Diagram** is referred to as the **software database design**. This ER Diagram is the graphical depiction of relationships between all the entities involved in the system. Its major components are Entities, Attributes, and Relationships.

The ER Diagram is used to build and troubleshoot the System's relational database. It works best with DFD (Data Flow Diagram), which is responsible for data movement.

Importance of ER Diagram for Restaurant Management System :

The **importance of ER diagram for restaurant management system** is to help in modeling its data storage or database. It is the basis of the project's database foundation for construction. This entityrelationship diagram (ERD) also aids in defining the data types to be stored such as their attributes and characteristics.

In addition to that, the ER Diagram also describes how an entity interacts with other entities. All other real-world projects are presented with ER Diagrams (database designs).

Restaurant Management System ER Diagram

ER Diagram of Restaurant Management System shows the system entity and the supposed functions in each relationship. It is the supposed database design of the project. This conveys the data that would be present in the restaurant system, its characteristics, and its connection with other data (entity).

RESTAURANT MANAGEMENT SYSTEM

ER DIAGRAM

ER Diagram for Restaurant Management System

are made to meet the required specification of the system and provide much more specific details of each entity within the system.

ER Diagram for Restaurant Management System with Tables

Table Name: Customer

Field	Description	Type	Length
cust_ID (PK)	Customer ID	Int	11
name	Customer Name	Varchar	255
contact	Customer Contact	Int	11
address	Customer Address	Text	
username	Customer Username	Varchar	255
password	Customer Password	Varchar	255

Table Name: Crew

Field	Description	Type	Length
crew_ID (PK)	Crew ID	Int	11
name	Crew Name	Varchar	255
contact	Crew Contact	Int	11
address	Customer Address	Text	
username	Crew Username	Varchar	255
password	Crew Password	Varchar	255

Table Name: Order Details

Field	Description	Type	Length
order_ID (PK)	User ID	Int	11
crew_ID (FK)	Crew ID	Int	11
cust_ID (FK)	Customer ID	Int	11
food_ID (FK)	Food ID	Int	11
date	Order Date	Date	11
status	Order Status	Varchar	255

Table Name: Payment

Field	Description	Type	Length
pay_(PK)	Payment ID	Int	11
cust_ID (FK)	Customer ID	Int	11
order_ID (FK)	Order ID	Int	11
delivery_ID (FK)	Delivery ID	Int	11
amount	Amount	Int	11
date	Payment Date	Date	

Table Name: Menu

Field	Description	Type	Length
menu_ID(PK)	Menu ID	Int	11

food_ID (FK)	Food ID	Int	11
details	Menu Details	Varchar	255

Table Name: Food

Field	Description	Type	Length
food_ID (PK)	Food ID	Int	11
name	Food Name	Varchar	30
status	Food Status	Int	11
price	Food Price	Int	11

Table Name: Delivery

Field	Description	Type	Length
delivery_ID (PK)	Delivery ID	Int	11
order_ID (FK)	Order ID	Int	11
date	Delivery Date	Date	

Table Name: Transaction

Feild	Description	Type	Length
trans_ID (PK)	Transaction ID	Int	11
trans_date	Transaction Date	Date	
cust_ID	Customer ID	Int	11
crew_ID (FK)	Crew ID	Int	11
order_ID (FK)	Order ID	Int	
report_date	Date of Report	Date	

Table Name: Transaction

The tables given will be the basis for developers on how would they do the **restaurant management system database design**. It has the complete description of the database and they will put this into the program or data storage the same as the names given to each of the tables. They will create a database with the attributes given as well as the value of each attribute.

8. REQUIREMENT SPECIFICATION

7.1 HARDWARE REQUIREMENTS :

Name of component	Specification
Processor	Core i3-5005u CPU@ 2.0
RAM	4.00 GB
Hard disk	1 TB
Monitor	15" color monitor
Keyboard	122 keys

7.2 SOFTWARE REQUIREMENTS :

Name of component	Specification
Operating System	Windows 10 or higher
Languages	Html,Css,JavaScript,php
Database	MySql
Browser	Any of Mozilla, Opera, Chrome etc
Software Development Kit	VS code

9.2 FUNCTIONAL DESCRIPTION

9.2.1 ORDER

User can give order online with cash on delivery option. Restaurant manager can get the notification via sms of placed orders.

9.2.2 FOOD ITEMS

Admin will manage the food items and their categories with prize.

Visitor or registered user can view or select the food item.

9.2.3 ACCOUNT MANAGEMENT

All the online/offline orders will be managed in the system.

Bill will be generated by the system.

Report can be generated of different criteria Orders between two dates. Which food items are sold most .How many Registered user was increased at end of month.

10. TESTING STRATEGY

What is Testing?

In computer hardware and software development, testing is used at key checkpoints in the overall process to determine whether objectives are being met. For example, in software development, product objectives are sometimes tested by product user representatives. Software testing is very important because of the following reasons: Software testing is really required to point out the defects and errors that were made during the development phases. It's essential since it makes sure of the customer reliability and their satisfaction in the application.

Types of Testing:

- Unit Testing.
- Integrated Testing • Functional Testing.
- System Testing
- Performance Testing.
- Usability Testing.
- Beta Testing.

1. Unit Testing:

Unit testing is the testing of an individual unit or group of related units. It is often by the programmer to test that the unit he/she has implemented, is producing output against given input.

2. Integrated Testing:

Integration testing is testing in which a group of components are combined to produce output. Also, the interaction between software and hardware is tested in integration testing if software and hardware components have any relation.

3. **Functional Testing:** Functional testing is the testing to ensure that the specified functionality required in the system requirements works.
4. **System Testing:** System testing is the testing to ensure that by putting the software in different environments (e.g., Operating System) it still works. System testing is done with full system implementation and environment.
5. **Performance Testing:** Performance testing is the testing to assess the speed and effectiveness of the system and to make sure it is generating results within a specified time as in performance requirements.
6. **Usability Testing:** Usability testing is performed from the perspective of the client, to evaluate how the GUI is user friendly? How easily can the client learn?
7. **Beta testing:** Beta testing is the testing which is done by end users, a team outside development, or publicly releasing full pre-version of the product which is known as beta version.

Test Cases:

Test Case ID	Test scenario	Test steps	Test Plan	Expected Result	Actual Result	Pass/Fail
TC01	Check Admin/manager login	<ol style="list-style-type: none"> 1. Go to the page 2. Enter the Food you want. 	NO user Id password required	User login to the application	As expected.	Pass.
TC02	Search the query	Enter any food which you want to search	-	List Of Food Appeared	As expected.	Pass

Test Plan:

SERIAL NUMBER.	WORK BREAKDOWN STRUCTURE.	PROJECT TEAM MEMBER.	RESULT.	PROPOSED DATE OF COMPLETION.
1.	ANALYSIS	ALFIYA ADITI FAIYAZ MEHANDI	SUCCESSFULLY COMPLETED.	--
2.	DESIGN	FAIYAZ MEHANDI	SUCCESSFULLY COMPLETED.	--
3.	CODING		UNDER PROCESS	--
4.	TESTING		UNDER PROCESS	--

11. SOFTWARE MAINTENANCE PLAN

11.1 SOFTWARE PROJECT PLAN – GANTT CHART

13. LIMITATIONS:

1. Limitations of periodic system:

With the periodic system, the company knows the inventory level with certainty only when it physically counts the inventory at the end of each period. Throughout the period, the company takes customer orders without knowing the exact inventory count or whether enough products are available to meet customer demand.

2. Limited connection:

The system limits human interaction. In this system, they are only limited to software access and maintenance and interaction amongst themselves as it is an offline management system. Offline ventures lease or build facilities for their customers, while e-commerce websites are global storefronts for online companies.

3. Redundancy of data:

It would be considered one of the important aspect of any software that is, data redundancy. The data that is to be maintained and stored in database should not have redundancy. If it has redundant data it would lead to data inconsistency.

4. Limited growth:

The market for an offline business is usually limited. For example, a restaurant's clientele may live within a 10-mile radius, which could restrict the owner's growth opportunities. Several traditional business ventures, such as bookstores and video rental stores, have become unprofitable because they cannot compete with the low-cost structure of their online counterparts.

14. FUTURE SCOPE

1. Enhanced and Rich UI will be Designed.
2. Special Offer will be implemented.
3. Another payment option will be included.
4. User Will get a Discount of 30% in an order of Rs 300 or above.

15. PROPOSED SYSTEM:

There are lots of advantages of having quality restaurant management software. What it does is basically decreases the amount of work you have to do usually. Most of the restaurants these days deal larger amounts of cash along with credit cards being swiped, not to forget online orders which make it quite difficult to keep up with everything. This is when restaurant management software becomes important.

In our app first customer will create his account after that select the item which he want to order then select the payment gateway and then process through his order. On the other hand there would be an administrator who would add delete the items from the menu list.

16. CONCLUSION

Here the need for tablet food ordering is analyzed and its advantages over the traditional food ordering system in restaurants are studied. The proposed online restaurant management system is time saving and error free as compared to the traditional system. This system attracts customers and also adds the efficiency of maintaining the restaurant's ordering and billing. Hence it is the modern way to grow up the business using Ecommerce. Here implementation of an advanced restaurant menu ordering system using smart android mobile phone. This system entirely reduces the unnecessary time.

17. Software Design

USER INTERFACE-

The screenshot displays a mobile application interface for "TESTO BURGER". At the top, there is a navigation bar with links for "ABOUT", "LOGIN", "MEGAMENU", "SHOP", "BLOG", "BOOKINGS", and a shopping cart icon showing "2". Below the navigation bar, a large yellow banner features the text "DOWNLOAD MOBILE APP AND SAVE UP TO 20%" in bold, dark letters. A smaller text below it reads: "Aliquam a augue suscipit, luctus neque purus ipsum and neque dolor primis libero tempus, blandit varius". To the right of the banner is a smartphone displaying a menu with a red and white striped awning above it. The menu categories include "Popular Food" and "See All". Below the phone is a large image of a cheeseburger with lettuce, tomato, and cheese, accompanied by a glass of soda and a serving of fries. At the bottom of the screen, there are six small thumbnail images representing different food items: Starbucks coffee, a bottle of Heublein beer, a sandwich in a paper bag, the Coca-Cola logo, the McDonald's golden arches logo, and a Pepsi can.
